Standard International Labelling for FluQuadri Junior Batch U5815AG

Dear Healthcare Professional

Sanofi Pasteur wishes to inform you of the availability of FluQuadri Junior vaccine, packaged in the Standard International labelling (**Batch number U5815AG, Expiry 11 January 2018**).

The Standard International labelling is for the global market and hence is different to the labelling used in Australia, as highlighted below;

Australian labelling	Standard International labelling
<p>FluQuadri 0.5 mL 3 years & over</p>	<p>FluQuadri Junior 0.25 mL 6 to 35 months of age</p>
<p>Front panel of box</p> 	<p>Front panel of box</p> 
<p>Syringe label (label text is blue)</p>	<p>Syringe label (label text is pink)</p>
	
<p>Plunger stopper – clear</p>	<p>Plunger stopper - pink</p>
	

FluQuari Junior batch packaged in the Standard International labelling is necessary in order to ensure the continued supply of influenza vaccines for children aged 6 to 35 months for 2017 influenza season.

The Standard International labelling is written in English and Spanish. Furthermore in other countries, FluQuadri Junior is sold under the brand name "FluQuadri". Consequently the box has been overlabeled with the Australian brand name "FluQuadri Junior".

However the label on syringe still refers to "FluQuadri" so care should be taken to ensure the two FluQuadri syringes are not confused and children under 3 years do not receive the higher dose Australian FluQuadri.

Please keep this letter near the refrigerator where vaccines are kept and before administration, check the syringe to ensure 0.25 mL syringe with pink label and pink plunger stopper is only given to children aged 6 to 35 months.

Should you have any questions relating to this product, please call Sanofi Pasteur Medical Information at 1800 829 468 or email vaxihelp@sanofipasteur.com.

Thank you for your understanding.

Regards,

Russell Jacobson
